

# Task 2: Kruskal's Algorithm for MST

Implement Kruskal's algorithm to find the minimum spanning tree of a given connected, undirected graph with non-negative edge weights.

Code-:

```
package com.wipro.assignment;

import java.util.Arrays;

public class KruskalMST {

    static class Edge implements
Comparable<Edge> {
        int source, destination,
weight;

        public Edge(int i, int j, int
k) {
            // TODO Auto-generated
constructor stub
        }

        @Override
```

```

        public int compareTo(Edge
other) {
            return
Integer.compare(weight,
other.weight);
        }
    }

    public static void
KruskalMST(Edge[] edges, int V) {
        // Sort edges by weight
        (ascending order)
        Arrays.sort(edges);

        Subset[] subsets = new
Subset[V];

        // Create `V` subsets with
        single elements
        for (int i = 0; i < V; ++i) {
            subsets[i] = new
Subset(i, 1);
        }

        int e = 0; // To count the
        number of edges added
    }
}

```

```
        int result = 0;    // To store  
the weight of MST
```

```
        // Pick edges one by one in  
sorted order
```

```
        while (e < V - 1) {  
            Edge nextEdge =  
edges[e++];
```

```
            int x = find(subsets,  
nextEdge.source);
```

```
            int y = find(subsets,  
nextEdge.destination);
```

```
            // If including this edge  
doesn't cause a cycle
```

```
            if (x != y) {  
                Union(subsets, x, y);  
                result +=
```

```
nextEdge.weight;  
            }
```

```
        }
```

```
        System.out.println("Following  
are the edges in constructed MST");
```

```
        for (Edge edge : edges) {
```

```

        int x = find(subsets,
edge.source);
        int y = find(subsets,
edge.destination);
        if (x != y) {

System.out.println(edge.source + " --
" + edge.destination + "      " +
edge.weight);
        }
    }
    System.out.println("Total
weight of MST: " + result);
}

```

```

// Utility function to find the
root with path compression
static int find(Subset[] subsets,
int i) {
    if (subsets[i].parent != i) {
        subsets[i].parent =
find(subsets, subsets[i].parent);
    }
    return subsets[i].parent;
}

```

```
// Union function using Union by Rank
```

```
static void Union(Subset[] subsets, int x, int y) {  
    int xroot = find(subsets, x);  
    int yroot = find(subsets, y);
```

```
// Attach the smaller rank tree under the root of the larger rank tree
```

```
    if (subsets[xroot].rank < subsets[yroot].rank) {  
        subsets[xroot].parent = yroot;
```

```
    } else if (subsets[xroot].rank > subsets[yroot].rank) {  
        subsets[yroot].parent = xroot;
```

```
    } else {  
        // If ranks are same, then make one as root and increment its rank by 1
```

```
        subsets[yroot].parent = xroot;
```

```
        subsets[xroot].rank++;  
    }
```

```

    }

    public static void main(String[]
args) {
        /*
        * Let us create following
graph
        *
        *      2      3
        *      (0) -- (1) -- (2)
        *      |  /  \   |
        *      4/      \5  |
        *              (3)
        */
        int V = 4;    // Number of
vertices in graph
        Edge[] edges = new Edge[5];

        edges[0] = new Edge(0, 1, 2);
        edges[1] = new Edge(0, 3, 4);
        edges[2] = new Edge(1, 2, 3);
        edges[3] = new Edge(1, 3, 5);
        edges[4] = new Edge(2, 3, 1);

        KruskalMST(edges, V);
    }

    static class Subset {

```

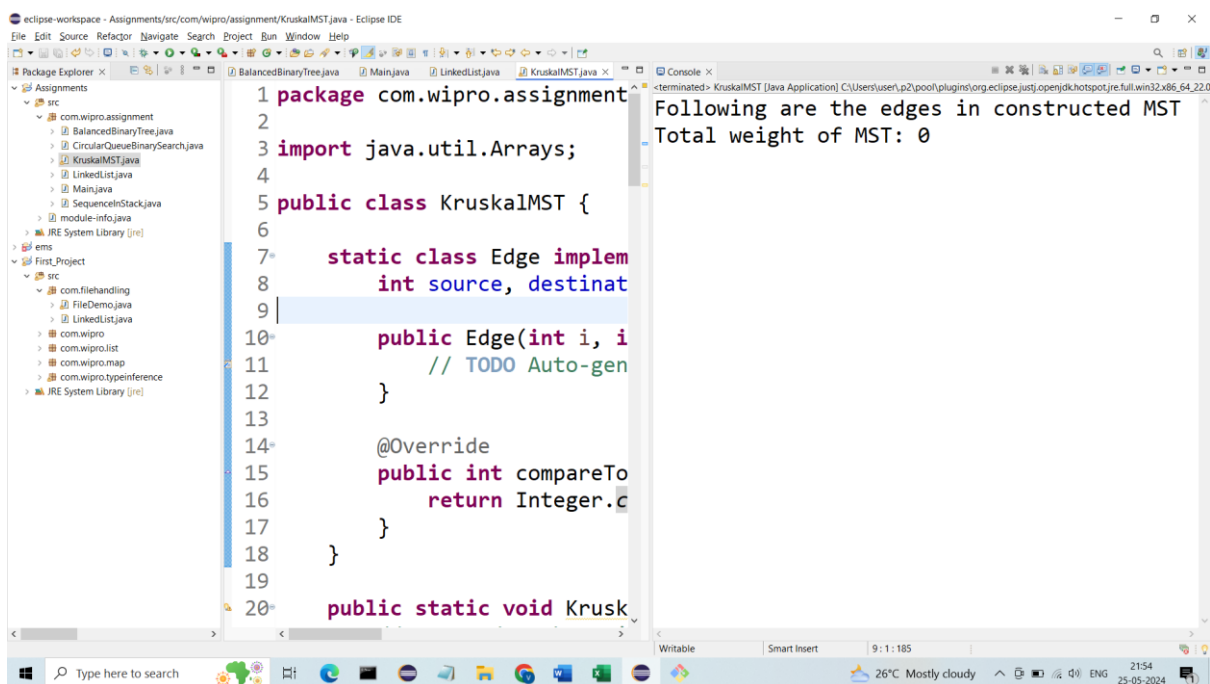

```

    int parent, rank;

    public Subset(int parent, int
rank) {
        this.parent = parent;
        this.rank = rank;
    }
}

```

Output: -

```

1 package com.wipro.assignment;
2
3 import java.util.Arrays;
4
5 public class KruskalMST {
6
7     static class Edge implements
8         Comparable<Edge> {
9
10        int source, destination;
11
12        public Edge(int i, int j, int w) {
13            // TODO Auto-generated constructor stub
14        }
15
16        @Override
17        public int compareTo(Edge o) {
18            return Integer.compare(this.w, o.w);
19        }
20
21        public static void KruskalMST() {
22
23        }
24    }
25 }

```

Console Output:

```

-terminated> KruskalMST [Java Application] C:\Users\user\p2\pool\plugins\org.eclipse.justi.openjdk.hotspot.jre.full.win32.x86_64.22.0
Following are the edges in constructed MST
Total weight of MST: 0

```
